Expertise

- Full-Stack Web Development (Django, REST APIs)
- Mobile Application Development (Flutter)
- System Design & Scalable Architecture
- Real-Time Systems (WebSockets, Live Notifications)
- Database Design & Management (Relational Databases)
- Problem Solving & Algorithmic Thinking

Language

Tagalog
English
Bisaya
Waray-Waray

Milestones

Hello World!
Wrote my first line of code 2022

Eastern Visayas Coding Olympics S2
5th out of 18 Schools 2024

ICT Diagnostic Examination (Written)
DICT Region VIII 2025

Best Male Presenter – System Presentation 2025

Best in System Development – Academic Project 2025

Web Developer in Rameses Systems Org - Internship 2026

Experience

2026 January - April

Internship - Web Developer

Rameses Systems Org.

During my OJT, I worked on several projects that strengthened my skills in application development, system design, and data management. I began by developing an App Form Builder, where I learned the fundamentals of form creation, input handling, and validation while improving its functionality based on feedback. I then created a DocuSign application, gaining experience in digital document processing, including file upload, preview, and electronic signature integration. In the final phase, I contributed to enhancing the Filipizen application by improving its design, usability, and overall user experience, resulting in a more efficient and polished system.

Latest Projects

Technologies Used:
- Django
- Flutter
- Dart
- REST APIs
- WebSockets
- Mediapipe
- BiLSTM (Sequence Model for gesture recognition)

Mobile Based Sign Language Translator

I developed a mobile-based, real-time Filipino Sign Language translator designed to improve communication for deaf and mute individuals. The application also features a dictionary page where users can learn basic Filipino Sign Language through video demonstrations. Additionally, it includes a quiz section that allows users to test and improve their recognition of different sign language gestures.

Technologies Used:
- Django
- WebSockets
- Html & CSS
- Bootstrap

Ekubo Marketplace

This ecommerce website is built specific only for traditional market vendors and buyers that allow the buyers to order the item and this website allow user to communicate directly to the vendors using the messenger inside the website with a realtime functionality.

Technologies Used:
- Django
- React
- Html & CSS
- Bootstrap
- Rest APIs

Community Based Special Group Monitoring System

A community-based application system that allows residents to apply for government programs, with barangay officials conducting initial verification and LGU performing final validation.

Tech Stacks

Django	95%
Python	80%
REST API	80%
Laravel	80%
Php	95%
Git	80%
MySQL	85%
Flutter	80%
HTML	90%
CSS	95%
React	70%
Dart	70%

Education

2022-2026
Biliran Province State University

Bachelor of Science in Computer Science

I completed a Bachelor of Science in Computer Science at BiPSU(2022–2026), where I built a solid foundation in software development, system design, and database management.
